How To Wash Hands the One-Time Method

To wash hands the *One-Time Method*:

- Fill the washing cup with at least 3.3 fl. oz. (99 ml) of water.
- Pour enough water (may be as little as 1.3 fl. oz.--39 ml, or 1/6 cup) from the washing cup to completely cover your entire first hand (either hand may be first but it is proper to wash your right hand first).
- Pour enough water to completely cover the second hand.

NOTE You do not need to pour any more than that or to break up the *revi'it* into two pours.
